COMMANDANT INSTRUCTION M3501.24B

WLB STATUS OF RESOURCES AND TRAINING SYSTEM (SORTS) DECISION AIDS

Ref:

- (a) Coast Guard Measurement Strategy and Responsibilities, COMDTINST 5224.9 (series)
- (b) Required Operational Capability (ROC) and Projected Operational Environment (POE) for the WLB 180 Class Seagoing Buoy Tender, COMDTINST C3501.31 (series)
- (c) Status of Resources and Training System (SORTS), NWP 10-1-11 (series)
- (d) Status of Resources and Training System (SORTS) for Coast Guard Units, COMDTINST M3501.2 (series)
- (e) Cutter Training and Qualification Manual, COMDTINST M3502.4 (series)
- (f) Casualty Reporting Procedures (MATERIEL), COMDTINST M3501.3 (series)
- (g) Personnel Allowance List (PAL)
- (h) Contingency Personnel Allowance List (CPAL)
- PURPOSE. To provide a set of decision aids that may be used 1. as a self-measurement tool for helping assess operational readiness as part of a unit's program to meet the measurement requirements of reference (a). And, to provide those units required to report into the Status of Resources and Training System (SORTS) with decision aids and guidelines to help determine a cutter's SORTS status. used with references (b) through (h), these decision aids will improve the quality and consistency of information needed for reporting in SORTS.

B:c MLCs (6 Extra), Districts (4 Copies) Only FOR OFFICIAL USE ONLY

> PUBLIC AVAILABILITY TO BE DETERMINED UNDER 5 USC 552

COMDTINST M3501.24B

- ACTION. District commanders shall ensure that subordinate units that are required to report their SORTS status comply with the assessment criteria in the decision aids.
- 3. DIRECTIVES AFFECTED. COMDTINST M3501.24A is cancelled.
- 4. <u>DISCUSSION</u>. The decision aids use the status of specific elements of cutter personnel, training, and material to objectively assess the cutter's readiness to meet the mission performance standards assigned in the WLB 180 Class ROC/POE. They are organized to correspond with the step-by-step procedures promulgated in references (c) and (d) to help the SORTS writer complete an accurate SORTS report with minimum effort.

5. PROCEDURE.

- a. Decision aids may be used as a self-measurement tool to help assess unit operational readiness as part of the unit's measurement program.
- b. Unit commanding officers shall also use these decision aids in preparing and reporting resource-specific SORTS assessments for the unit's Primary Mission Areas, when required by reference (d) or as directed by the chain of command.
- 6. <u>CHANGES</u>. Recommendations for changes to these decision aids shall be submitted to Commandant (G-RER), via the chain of command.
- 7. <u>REPORTS</u>. The decision aids are used in the preparation of the Status of Resources and Training System (SORTS) report, RCN-3501-01, when required.

CHAPTER 1. INTRODUCTION

- A. <u>Purpose</u>. To provide a set of decision aids and guidelines to help determine a cutter's status within the Status of Resources and Training System (SORTS). When used with references (b) through (h), these decision aids will improve the quality and consistency of readiness information contained in the SORTS database.
- B. <u>Applicability</u>. These decision aids help the unit SORTS writer determine unit status for the following elements of the SORTS report:
 - 1. Mission, Resource Area, and Overall Status. The decision aids assist in the objective evaluation of assigned Coast Guard and Naval Warfare missions. The missions are organized under resource areas and are summarized under an overall status in line with the step-by-step procedure of status assessment detailed in references (c) and (d). This process is accomplished twice; once to determine Naval Warfare mission, resource area, and overall statuses, and once to determine Coast Guard mission, resource area, and overall statuses.
 - 2. Commander's Assessment of Percent Effective (PCTEF). The decision aids provide broad guidance to help the commanding officer determine a subjective assessment of the unit's current ability (within the next 72 hours) to undertake all assigned Naval Warfare missions. The assignment of PCTEF considers the overall Naval Warfare (CROVL) rating and other tangible and intangible factors that impact on the unit's readiness to perform its assigned primary Naval Warfare missions. Since the status of resources and training are always major factors in determining PCTEF, commanding officers are limited to a range of PCTEF values associated with the unit's current CROVL rating.
 - 3. Major Equipment (MEOPT) and Crew Data (CREWA). The major equipment listed in the decision aids was selected from the list provided in reference (c) and is specific to this class of cutter. For uniformity, cutters should only report the major equipment listed in the decision aids.
 - 4. Chemical, Biological Defense Status (CBD). The decision aids assist in the objective determination of chemical, biological defense status. CBD status is reported by all units, even those not normally trained or equipped for CBD operations. CBD is not a mission area. CBD status is not used to compute mission, resource area, and overall status. It should only be used as a factor in determining the commander's assessment of percent effective (PCTEF) when CBD equipment and/or training are immediate factors that could impact mission performance.

CHAPTER 2. PROCEDURES AND INSTRUCTIONS

A. SORTS Assessment Procedures.

- Step-by-step assessment procedures are detailed by the Navy in reference (c) and are further modified by the Coast Guard in reference (d). Use copies of the foldout worksheets provided in the back of reference (c) to help complete the SORTS report.
- Chapters 3 and 4 of reference (c) and enclosures (3) and (4) of reference (d) explain how to format the heading and report general status information on the cutter.
- 3. Chapter 5 of reference (c) and enclosure (5) of reference (d) deal specifically with the evaluation of missions and the resources (personnel, supply, equipment, and training) required to complete them.
 - a. Begin the unit status assessment with step 1. Step 3 explains when the unit does not need to assess mission and resource status due to special situations like a major overhaul.
 - b. These decision aids support steps 4 through 7, where the SORTS writer must examine the status of resources needed to accomplish each primary mission, and assign mission ratings and degradation reason codes. In steps 8 through 20, mission resource data is evaluated and summarized into four resource area ratings and a single overall rating. Remember that steps 4 through 20 must be accomplished twice; once to determine Naval Warfare mission, resource area, and overall statuses, and once to determine Coast Guard mission, resource area, and overall statuses.
 - c. These decision aids also provide guidance on how to determine the commander's assessment of percent effective (PCTEF) in step 21. PCTEF is assessed and reported only for primary Naval Warfare missions.
- Chapter 6 of reference (c) and enclosure (6) of reference (d) detail procedures for reporting additions, changes, and deletions to unit status data.
- Chapter 7 of reference (c) and enclosure (7) of reference (d) detail procedures for reporting major equipment (MEQPT) and crew data (CREWA).

6. Finally, these decision aids support chapter 8 of reference (c), and enclosure (8) of reference (d) where chemical, biological defense (CBD) status is determined. CBD status is reported by all units, even those not normally equipped and/or trained for CBD operations. CBD is not a mission area. It is reported under the Special Capability (SPCAP) reporting label.

B. How to Use the Decision Aids.

- The decision aids are organized by level of importance, with the most critical questions asked first.
- 2. Use the decision aids to compute status ratings as follows:
 - a. The rating is a numerical value that corresponds with status categories, defined in reference (c). Determine the rating for the question or item by moving from left to right until a maximum standard can be met. In most cases a "yes" will result in a better rating. The box where the item line intersects the appropriate rating column can be checked lightly in pencil or the rating can be written on a separate piece of paper for further comparison and evaluation.
 - b. Evaluate each question or item using the choices offered in the blocks to the right of the item and the "<YES/NO>" guide at the top of each decision aid section. The choices in each block of the "<YES/NO>" columns are numerical, percentages, a short phrase, a word, or a symbol. A "yes" earns the rating to the left of the box, and a "no" earns a rating to the right. The choice symbol "*-->" means the answer to the question is simply either yes or no. A choice followed by an arrow "---->" that covers more than one block follows the same pattern.
 - c. The "#" is used to indicate a footnote.
 - d. The design of the form is intentionally truncated where no evaluation criteria exists. Many items can only be evaluated to a minimum rating of "2", for example.
 - e. The worst item rating (largest number) for a particular mission resource area shall be transferred to the SORTS worksheet. For example, if there were five items evaluated in a particular mission resource area and their individual ratings were "1, 1, 2, 3, 2", the rating for that mission resource area would be a "3".

- f. Commanding officers may downgrade or lower the rating (assign a higher number) for any particular mission resource area if there is a compelling reason to do so. However, the reason shall be noted in the remarks section of the SORTS report.
- g. Commanding officers shall not upgrade or raise the rating (assign a lower number) for any particular mission resource area once it is determined by using the appropriate decision aid.
- 3. The Coast Guard Mobility (CGM) and Naval Warfare Mobility (MOB) missions are related, but are assessed and reported separately. The MOB rating is a function of the CGM rating, but the CGM rating is not dependent on the MOB rating. A number of other Coast Guard and Naval Warfare missions are also interdependent.

E. Commander's Assessment of Percent Effective (NWP 10-1-11, Chapter 5, Step 21). The commander's assessment of percent effective (PCTEF) is a subjective assessment made by the commanding officer of the unit's current ability (for the next 72 hrs) to undertake all assigned Naval Warfare missions.

PCTEF - Step One 1 The commanding officer shall consider the following tangible and intangible factors: a Cutter's Overall (CROVL) Rating b!Readiness Factors Personnel Equipment and Supplies Equipment Condition Training Mobility C4I Operations OPTEMPO Exercises Morale Leadership c¦Sustainability Factors d!Modernization Factors | e|Force Structure Factors

1	commanding officers	ays a major factor in PCTEF determination, s are limited to a PCTEF value associated current CROVL rating, as indicated below.

ł	; 3	060 to 080 Percent
1	. 4	000 to 059 Percent
	<u>5</u>	000 Percent

F. Major Equipment and Crew Data (NWP 10-1-11, Chapter 7). The following major equipment (MEQPT) and crew data (CREWA) shall be reported by all cutters:

MEQPT

11 MEQPT data is not currently reported by this class of cutter.

CREWA

1 CREWA data is not currently reported by this class of cutter.

4.75

G. Chemical, Biological Defense (NWP 10-1-11, Chapter 8).
Wartime chemical, biological defense (CBD) status shall be reported by all units, even those not normally equipped and/or trained for CBD operations. CBD is not a mission area. It is reported separately under the Special Capability (SPCAP) reporting label. CBD status is only considered in the commander's assessment of percent effective (PCTEF) when CBD equipment and/or training are immediate factors that could impact mission performance.
